EPOXY & COATINGS

THE LINE UP

This coating line is built to take coatings to another level. Using only 100% solids, premium grade resins, my coatings are blended to create high-end luxury-level metallic beauty. They bond hard, flow smooth, and hold up under daily wear, allowing you to create seamless surfaces with intensity, depth, movement, and presence. The finish feels exquisite without trying too hard, but performs perfectly to leave a lasting impression.

Ty Brown

Ty Brown *EPOXY*

This epoxy means business — a 100% solids, two-part coating built to bond hard and perform easily. Designed for strength, chemical resistance, and provide a seamless finish, it delivers a dense, high-build surface that holds up under traffic.

100% solids, self-leveling epoxy in a 3-gallon kit. Low-viscosity with extended work time for smooth flow, easy shaping, and rich metallic movement. Designed for interior concrete floors, countertops, garages, basements, and decorative commercial spaces.

Ty Brown *MVB*

This vapor barrier is a straight problem-solver — a 100% solids, two-part epoxy coating engineered to shut down moisture vapor. Built to control vapor emission rates up to 20lbs per 24 hours per 1,000 sq. ft., this system is designed to go down before epoxy floors.

Two-component moisture vapor barrier mixed 2:1. Penetrates and seals concrete to stop moisture at the source. Ideal for interior floors including garages, basements, commercial spaces, and as a base under decorative or metallic systems.
